EY OFFICE

ABOUT THIS PROJECT

- + Located on floors 30 through 40, the professional services firm required a workplace which accommodates maximum flexibility.
- + Worked with both EY and the design team through several collaborative sessions, and discussed primary AV concerns such as ease of use, ergonomics (i.e., mounting heights), heating assist systems, intelligibility of audio systems, and visual acuity.
- + Followed EY's global standards, and provided a Canadian interpretation, along with subsequent recommended modifications.
- + Assisted EY in documenting any possible changes to their global standards, ultimately designing systems which improve the user experience.
- + EY's office includes more than 300 collaboration rooms, each with its own docking station and a 42" TV.
- + Designed an additional 40 rooms with full presentation systems and integrated audio / video conferencing (including Skype integration).
- + In every room, users can connect to audio and, or video through one simple USB.
- + Designed the EY AV system as more of a base building system, which ties into the EY Tower Building Automation System (BAS).
- + Client Experience floor (located on the 40th floor) features an innovation centre and an atrium / client event area.
