

ARTS COMMONS

ABOUT THIS PROJECT

- + Six-storey arts complex in Calgary's Olympic Plaza district.
- + Features performance spaces, theatre workshops, rehearsal halls, meeting rooms, offices, and a café.
- + Provided mechanical and electrical consulting services on a wide variety of projects for the centre.
- + Designed solutions that dissipated the heat in the projection room and provided cooling to create a better working environment for audio-visual staff.
- + Original ventilation systems were causing over-cooling of the actors during live plays. Proposed mechanical design included solutions that were mindful of acoustics while making the necessary HVAC upgrades.
- + Renovations included numerous facility upgrades, such as a chiller replacement, office lighting renovations, HVAC to accommodate newly-rezoned office space, and control upgrades for their building management system to provide optimal thermal comfort.
